## Chrome: Saving All Open Pages at Once

When looking for something online, like most of you – I do a Google search.

But you never know if a link will be worth the effort. It's especially annoying if you click a search result link…the page takes forever to load…and it's not what you're looking for. Sometimes the BACK button won't take you back to your Google search…and you're stuck on the no-good page – and stuck re-doing the initial Google search.

So, I always RIGHT-CLICK result links in the Google result screen – and choose OPEN IN NEW TAB.

That way – if I don't like that page result (when I click on it and read it) – I just CLOSE that one tab…and I still have my Google search results on the original page/tab.

Sometimes Google returns a whole page of seemingly-great search results – and I want to visit ALL (or many) of them.

So I RIGHT-CLICK each page link and choose OPEN IN NEW TAB.

I can end up with an entire row of (webpage) tabs that I want to explore:

But then I run out of time – and need to shut down my computer or exit Chrome? I don't want to lose all these page tabs. What to do?

As shown here:
1. Click the CUSTOMIZE AND CONTROL GOOGLE CHROME button (the three vertical dots) at the top-right corner of your Chrome screen.
2. Click the ▶ beside BOOKMARKS.
3. Then click BOOKMARK OPEN PAGES.
4. When the BOOKMARK ALL TABS window appears – type a name for the list of favourites – and click SAVE.
5. When you want access to the tabs in the future – just click the CUSTOMIZE AND CONTROL GOOGLE CHROME button – then BOOKMARKS – then scroll down to the bottom of the list.
