Google Chrome: How to Print on a Single Page

If you have ever tried to print a webpage – and had it spill onto a second (or more) page…

Press [CTRL]P (or, RIGHT-CLICK the webpage and choose PRINT).
Make sure you have the desired printer selected.
Then, click the ᵛ beside MORE SETTINGS.
Down in the SCALE area – make sure CUSTOM is selected from the drop-down.
Decrease (manually, I'm afraid) the scale number until the only 1/1 appears in the bottom-right corner of your preview.
Click the PRINT button.

Print

Total: 1 sheet of paper

	Print	Cancel
